THIS LESSON IS ABOUT:

- CREATING MOBILE APPS

Hi! Welcome!

- What would you like to tell us about yourself?
- What do you enjoy the most about learning English with Campus Live?
- Are you satisfied with your improvement so far?
- Why did you pick this lesson?

Answer the following questions:

- ✓ What do know about mobile apps?
- ✓ What are your favorite mobile apps?
- ✓ How often do you use them?
- ✓ What are the pros and cons of your favorite apps?

What are mobile apps?

Read the following text below.

Mobile apps are software designed to run on a smartphone, computer, tablet or other electronic devices. Apps have a design intended for a specific function. Most apps relate to a business or service, but this is not in all cases. For example, gaming applications often have no relation to a business as far as concerns the user.

Developers can make money through apps by allowing advertisements, collecting revenue from the provider through app stores, charging the end-user to download the app or providing purchasable extras, such as coins in a game or test retakes on a learning application. Businesses can use applications to increase revenue flow by using the app to market their brand and by offering easier access to products and services. For example, airlines often use mobile apps to allow customers to check-in and purchase upgrades before arriving for their flight.

Popular Mobile Applications

How many of these famous logos can you identify.

✓ *Can you name other famous mobile apps?*

Mobile Apps (1)

Match the correct mobile app to their function:

1. Airbnb

a) The app features 360° street view, directions, location searching, real-time traffic, and route planning for walking, biking, driving, or public transportation

2. Instagram

b) A free video sharing website that makes it easy to watch online videos. You can even create and upload your own videos to share with others.

3. Google Maps

c) A free photo and video sharing app available on iPhone and Android. People can upload photos or videos to our service and share them with their followers or with a select group of friends. They can also view, comment and like posts shared by their friends.

4. YouTube

d) It connects people who want to rent out their property with people who are looking for accommodations, typically for short stays.

Mobile Apps (2)

Match the correct mobile app to their function:

5. WhatsApp

e) Allows users to create, watch, and share 15-second videos shot on mobile devices or webcams.

6. Spotify

f) You're able to call and exchange text, photo, audio and video messages with others across the globe for free, regardless of the recipient's device.

7. Netflix

g) Allows our members to watch TV shows and movies on an internet-connected device.

8. Tik Tok

h) Gives you access to millions of songs and other content from creators all over the world.

9. Amazon shopping

i) You can access, browse, purchase, and download software games, applications and other digital products

Designing mobile apps

Read the following text and answer the questions.

The **mobile user interface (UI)** or **mobile app interface design** is what you see when you use an application. Mobile app UI consists of the visual representation, interface, navigation, and processes that work behind the functional and structural actions in the mobile app.

The importance of mobile app interface design and **user experience (UX)** go hand in hand. UX is the holistic appearance and function of the app, while UI is all of the interaction in the application. In short, an app that is appealing and most feasible to users is an outcome of efficient user experience and user interface design techniques involved in building an app.

1. What is a user interface?
2. Why should any mobile app have a good visual representation?
3. Why is the user experience (UX) important?

Types of Design Interfaces for Mobile Apps

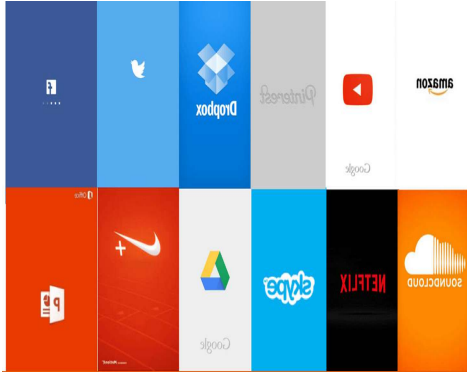

The most important thing to remember is that not all mobile UI designs are identical. They vary from brand to brand and on platforms they get live on.

Here are different types of mobile UI patterns that you must know:

- **SPLASH SCREEN** - The first screen you see on the launch of any app that shows the name of the app.
- **ONBOARDING SCREEN** - Is an introductory screen. It helps first-time users understand the app's main features, important information and how to make the user's journey less complicated.
- **HOME SCREEN** - The main screen of the entire app. All other screens are linked to the home page as it highlights the functional menu and features.
- **LOG IN AND PROFILE SCREENS** - Most apps have a login ID before you start using them. The right UI design of a login screen must be clear of all unnecessary distractions and make the experience quick, interactive, and smooth.

Match the correct image to the correct word using the descriptions from the previous page.

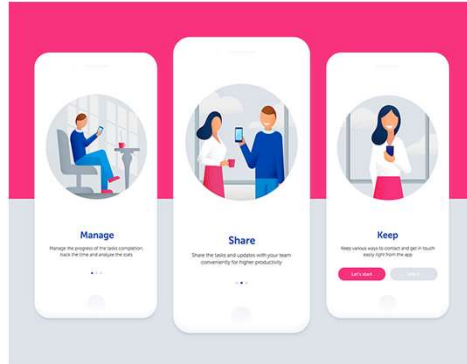

A

**Onboarding
Screen**

1

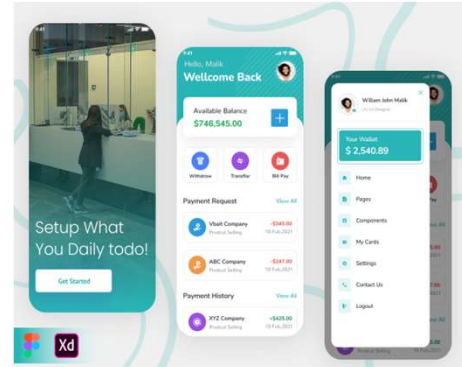

B

**Home
Screen**

2

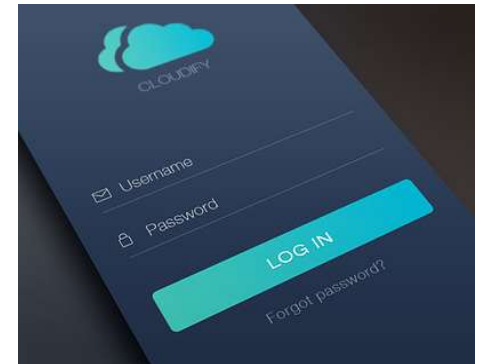

C

Splash Screen

3

D

**Login and
Profile Screen**

4

Useful Tips to Create a Successful Mobile App

Identify your audience

You need to know who you want to use your app. This can be done by searching for stats and insights, analyzing trends, by conducting a qualitative and quantitative research and identifying the demographics.

Offer genuine value to customers

The application should bring an important to users so they are motivated enough to download and use it. A good product has to be either fun or useful and it must be able to solve more than one problem.

Design a simple and intuitive UX/UI

Users must find the app easy to use by combining user experience (UX) and an appealing mobile user interface (UI). A well-thought-out registration process leads to better user acquisition and higher download numbers. The same goes with well-designed onboarding. When it's simple and understandable, then users will stick with your app and probably recommend it to new users.

Useful Tips to Create a Successful Mobile app (2)

Maintain high performance

One of the key factors here is the user's experience of bugs and glitches. In a US-based survey among 1,000 users, 88% said that they would abandon an app if they encountered bugs or glitches.

Ensure your app is safe

Mobile apps that don't take security and privacy seriously pose a real threat to users. Users should feel safe and trust the app they are using because it normally contains banking information, personal data, passwords, medical information etc.

Have regular updates

Develop new relevant features and keep your app updated. Continuously review the complexity of the user acquisition process (i.e. onboarding, registration forms, etc.). New technologies and approaches always emerge that make user sign ups more convenient. Users need to see that you continuously care about their experience.

Today we learned...

- ✓ To identify the functions of different mobile apps.
- ✓ To understand how mobile apps are created.
- ✓ Identify the different types of user interfaces.
- ✓ To identify the importance of user interface and user experience.
