

WELCOME TO CAMPUS LIVE

● USING THE PLATFORM

You can choose to turn your webcam on or not.

THIS LESSON IS ABOUT:

- INNOVATION IN TECH JOBS

Welcome!

- ✓ How are you doing today?
- ✓ Tell us a little bit about yourself.
- ✓ What do you want to achieve by the end of this lesson?

**Read the quote below and share your
opinión.**

Creativity is seeing what others see
and thinking what no one else ever
thought."

– Albert Einstein.

The Innovation Mindset!

- What does innovation mean to you?
- Do you see yourself as someone who innovates?
- Share an example of innovation in technology you admire?

Problem-Solving Techniques

**Read the techniques and try to
discuss them with your
classmates.**

Brainstorming

Mind Mapping

5 Whys

Brainstorming

This is a classic problem-solving technique where the goal is to generate a large number of ideas in a short time. The key is to be open-minded and not judge any ideas as bad or unrealistic at this stage.

The process typically involves:

- 1. Defining the problem:** Clearly state the issue you're trying to solve.
- 2. Going wild with ideas!** Encourage everyone to contribute freely, no matter how strange an idea might seem.
- 3. Building on each other's ideas:** Participants can riff off each other's suggestions, which can lead to unexpected and innovative solutions.

Brainstorming in Action

Challenge: Our company's video conferencing platform is experiencing lagging issues. Users are frustrated, and negative reviews are piling up

- ✓ *Brainstorm with your classmates for a couple of minutes and try to come up with a solution.*
-

Guidelines

How to Brainstorm:

- 1. Set the Ground Rules:** Remind everyone that all ideas are welcome, and wild suggestions can sometimes lead to breakthroughs.
- 2. Define the Problem:** Clearly state the challenge: Lagging video conferencing calls.
- 3. Be a good listener!**

Mind Mapping

This visual approach helps us organize our thoughts and see connections between ideas. Imagine a central topic in the middle with branches radiating outwards, each branch representing a sub-idea or related concept.

How to do it?

1. Start with the core problem in the center of the map
2. Branch out! Add Key points, potential causes, possible solutions, anything relevant to the central issue.
3. Connect the dot! Draw lines to show relationship between different ideas.

Mind Mapping in Action

Challenge: We need to develop a more user-friendly interface for our music streaming app. The current design is confusing, and users are struggling to navigate it.

- ✓ *Mind Map with your classmates for a couple of minutes and try to come up with a solution.*
-

Guidelines

How to do it:

1. The teacher will stop sharing the presentation and will share a whiteboard.
2. Guide your teacher to draw the map.
3. Start in the center: Write something like "Music App Interface"
4. Start Branching Out: Search Funcion, Playlist, etc.
5. Connect the Dots.

5 WHYS

5 Whys: This technique helps us dig deeper into the root cause of a problem. It's simple:

1. Start with the problem you're facing.
2. Ask "Why?" five times, each time focusing on the underlying reason for the previous answer.

Example: Problem: Our software is buggy.

Why? Because the code is poorly written.

Why? Because developers are rushed to meet deadlines.

Why? Because we lack proper project management tools.

Why? Because communication between teams is inefficient.

Why? Because... (continue until you reach the root cause)

5 WHYS in Action

Challenge: Our company website is experiencing slow loading times, leading to customer frustration and lost sales.

✓ *Use the 5 whys to tackle this issue.*

Guidelines

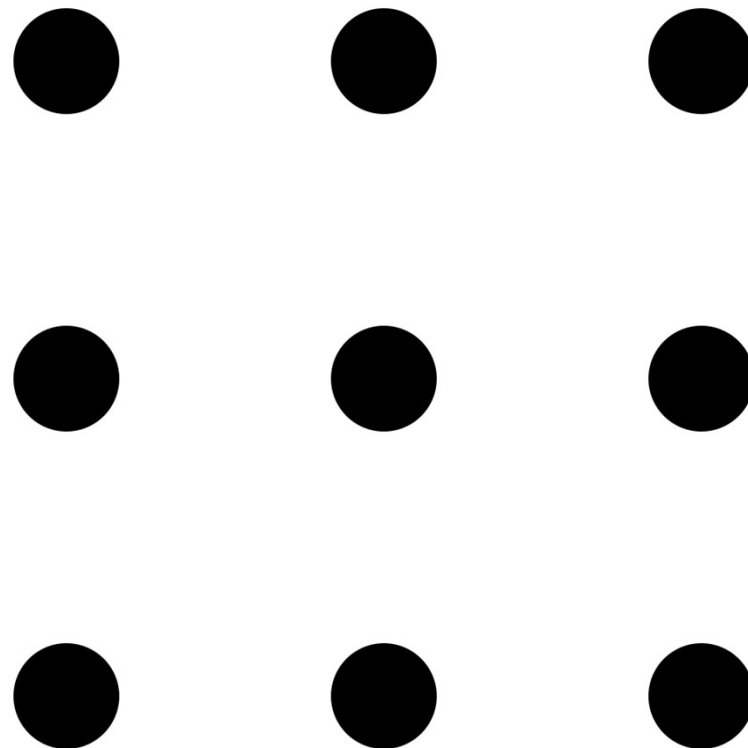

- Remember every question is based on the last answer.

5 Ways to Spark your Creativity

- New Experiences: Field trips, guest speakers, or thought-provoking videos can jolt their thinking patterns.
- Sensory Engagement: Mindfulness exercises, music & movement, or playing with art supplies can loosen inhibitions and spark connections.
- Challenge Perspectives: "What if...?" questions, reverse brainstorming, or role-playing can lead to unexpected solutions.
- Stimulating Environment: Brainstorming games, collaborative activities, and a safe space for risk-taking foster innovation.
- All Ideas Welcome: Encourage exploration and value all contributions to create a climate where creativity thrives.

Be Creative!

Teamwork: Collaboration Techniques for Success

Match the explanation to the techniques.

- A. Active Listening
- B. Effective Use of Technology
- C. Shared Goals & Accountability
- D. Brainstorming Together
- E. Respectful Debate
- F. Clear Communication

1. Pay close attention to your teammates' ideas and concerns. Ask clarifying questions to ensure understanding
2. Express your ideas and suggestions clearly and concisely. Be mindful of nonverbal communication as well
3. Encourage healthy disagreement. Listen to opposing viewpoints and consider the merits of different approaches
4. Build on each other's ideas during brainstorming sessions. This can lead to unexpected and innovative solutions
5. Utilize collaboration tools like project management platforms, communication apps, or shared documents to keep everyone informed and on the same page.
6. Ensure everyone understands the team's objectives and feels responsible for contributing to their achievement.

Your Feedback is Important to Us!

and help us
improve your
learning
experience.

Today we learned...

- ✓ About problem-solving techniques.
- ✓ To tackle challenges creatively.
- ✓ To spark our creativity.
- ✓ To collaborate effectively.

● START DRIVING MORE INNOVATION IN
YOUR TECH JOB

THANK YOU!!
