

WELCOME TO CAMPUS LIVE

● USING THE PLATFORM

You will never appear on the screen.

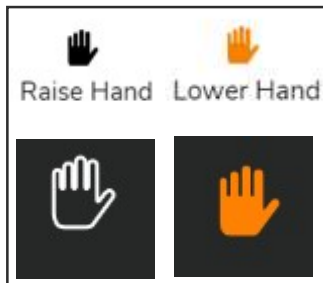

Attendees

← To see the names of your classmates.

Chat

← To communicate with the class or teacher.

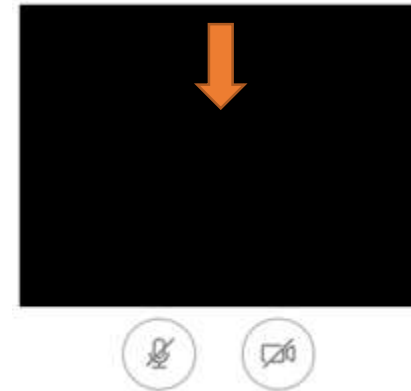

← To raise or lower your hand.

Exit

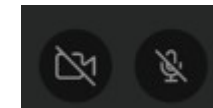

← To leave the class at the end.

Muted / unmuted.

Muted / unmuted.

Your camera will NEVER be turned on.

THIS LESSON IS ABOUT:

- NATURAL DISASTERS AND ENVIRONMENTAL ISSUES

Before Starting

Tell us about you:

- ✓ Where do you live / work ?
- ✓ How have you been?
- ✓ Is this your first live lesson?
- ✓ How are you progressing through the course?

What has happened in this scene?

Match and describe each picture.

A

Typhoon

1

B

Earthquake

2

C

Drought

3

D

Flood

4

Think of as many natural disasters as you can.

A

B

C

What do you see?

Match the terms and explain each picture and their impact on the planet.

- Oil Spill
- Forest fires
- Extreme weather

Elements of the Contemporary Environment

Match terms with their definition.

- | | |
|---------------------------------|---|
| 1. Forest fires | a. the use of wind to provide the mechanical power through wind turbines to turn electric generators and traditionally to do other work, like milling or pumping. |
| 2. Fracking | b. an overflowing of water onto land that is normally dry. |
| 3. Water Crisis / drought | c. a discharge of oil into the sea by the ship due to the accidents caused by human error or natural calamity. |
| 4. Carbon Footprint | d. an uncontrolled fire in an area of combustible vegetation occurring in rural areas. |
| 5. Extreme weather | e. this is caused by the overall increase in global temperature, and this melting can have serious consequences for all organisms on Earth. |
| 6. Oil spill | f. a technique designed to recover gas and oil from shale rock. |
| 7. Sustainable environment | g. the amount of greenhouse gases—primarily carbon dioxide—released into the atmosphere by a particular human activity. |
| 8. Flooding | h. an event of prolonged shortages in the water supply, whether atmospheric (below-average precipitation), surface water or ground water. |
| 9. Pollution / poor air quality | i. is when weather is significantly different from the usual weather pattern. |
| 10. Wind power | j. Is related with the maintenance of the factors and practices that contribute to the quality of environment on a long-term basis. |
| 11. Melting ice cap | k. occurs when harmful or excessive quantities of substances are introduced into Earth's atmosphere. |

Classroom Discussion

1. What do you know about wind power?
2. What are some examples of extreme weather events?
3. Are you worried about poor air quality? Explain.
4. How can you reduce your carbon footprint?
5. What is the biggest environment crisis in your country?
6. What other environmental problem are you concerned about?

Fact Finding

Choose a number from the box to complete these sentences about natural disasters.

500

26.5

10

1500

1. There are over _____ active volcanoes around the world.
2. Tsunamis can travel at up to _____ miles per hour.
3. Hurricanes are formed when water temperature reaches _____ °C.
4. _____ % of the world's population live within danger range of volcanoes.

Reflect

- Do you think there are more natural disasters than in the past?
- Do you think we are prepared to deal with the disasters?

Natural Disaster Message Board

Read the message board and then discuss the questions.

Sarah - "I think it's really scary that there are so many natural disasters these days. There are far more than in the past. Every time you switch on the news you see places that are flooded or countries in drought. I'm sure it's all connected to climate change and global warming."

Cindy - "The hurricanes and earthquakes that have happened in the past month just prove how unprepared we are for natural disasters. It's crazy that with all the technology and information available to us nowadays natural disasters still kill so many people. They should spend more money on research to develop warning systems for hurricanes, floods, earthquakes and tsunamis."

Roger - "You can't prepare for natural disasters as nobody knows when or where they are going to happen. It's nature's way of reminding us that she is in charge and we should respect her a lot more than we do."

- Who do you agree with?
- Who do you disagree with? Why?

Survival Role Play

Choose one of the roles on the following slide.

Imagine that you have survived a natural disaster and are waiting for rescue.

Only three of you can be rescued.

You need to justify why you should be one of the rescued people.

Role Play and Debate!

A. You are a scientist. You are currently working on a cure for Alzheimer's disease and you are close to finding the cure. You are the only member of the research team who knows what the exact possible cure is. You are single and don't have any children.

B. You are a fire fighter. You were awarded a medal for bravery last month after saving a family from a burning house. You are married and have a small baby.

C. You are a teacher in a local school. You love your job and the children in your class are problematic but are now doing very well. You have a special relationship with your students and have taught them all to read. You have a partner and two children.

D. You are a brain surgeon and work at the local hospital. You specialize in treating the very ill and have a high success rate of operations. You are married and have two grown up children.

Today we learned...

- ✓ To use appropriate vocabulary to describe environmental issues.
- ✓ To use words and collocations related to environmental issues.
- ✓ To practice reading skills.
- ✓ To develop speaking skills through a debate and classroom discussions.

● WEATHER DISASTERS AND CHANGES

THANK YOU!!
