THIS LESSON IS ABOUT:

UNDERSTANDING
ECOSYSTEMS

Hi! Welcome!

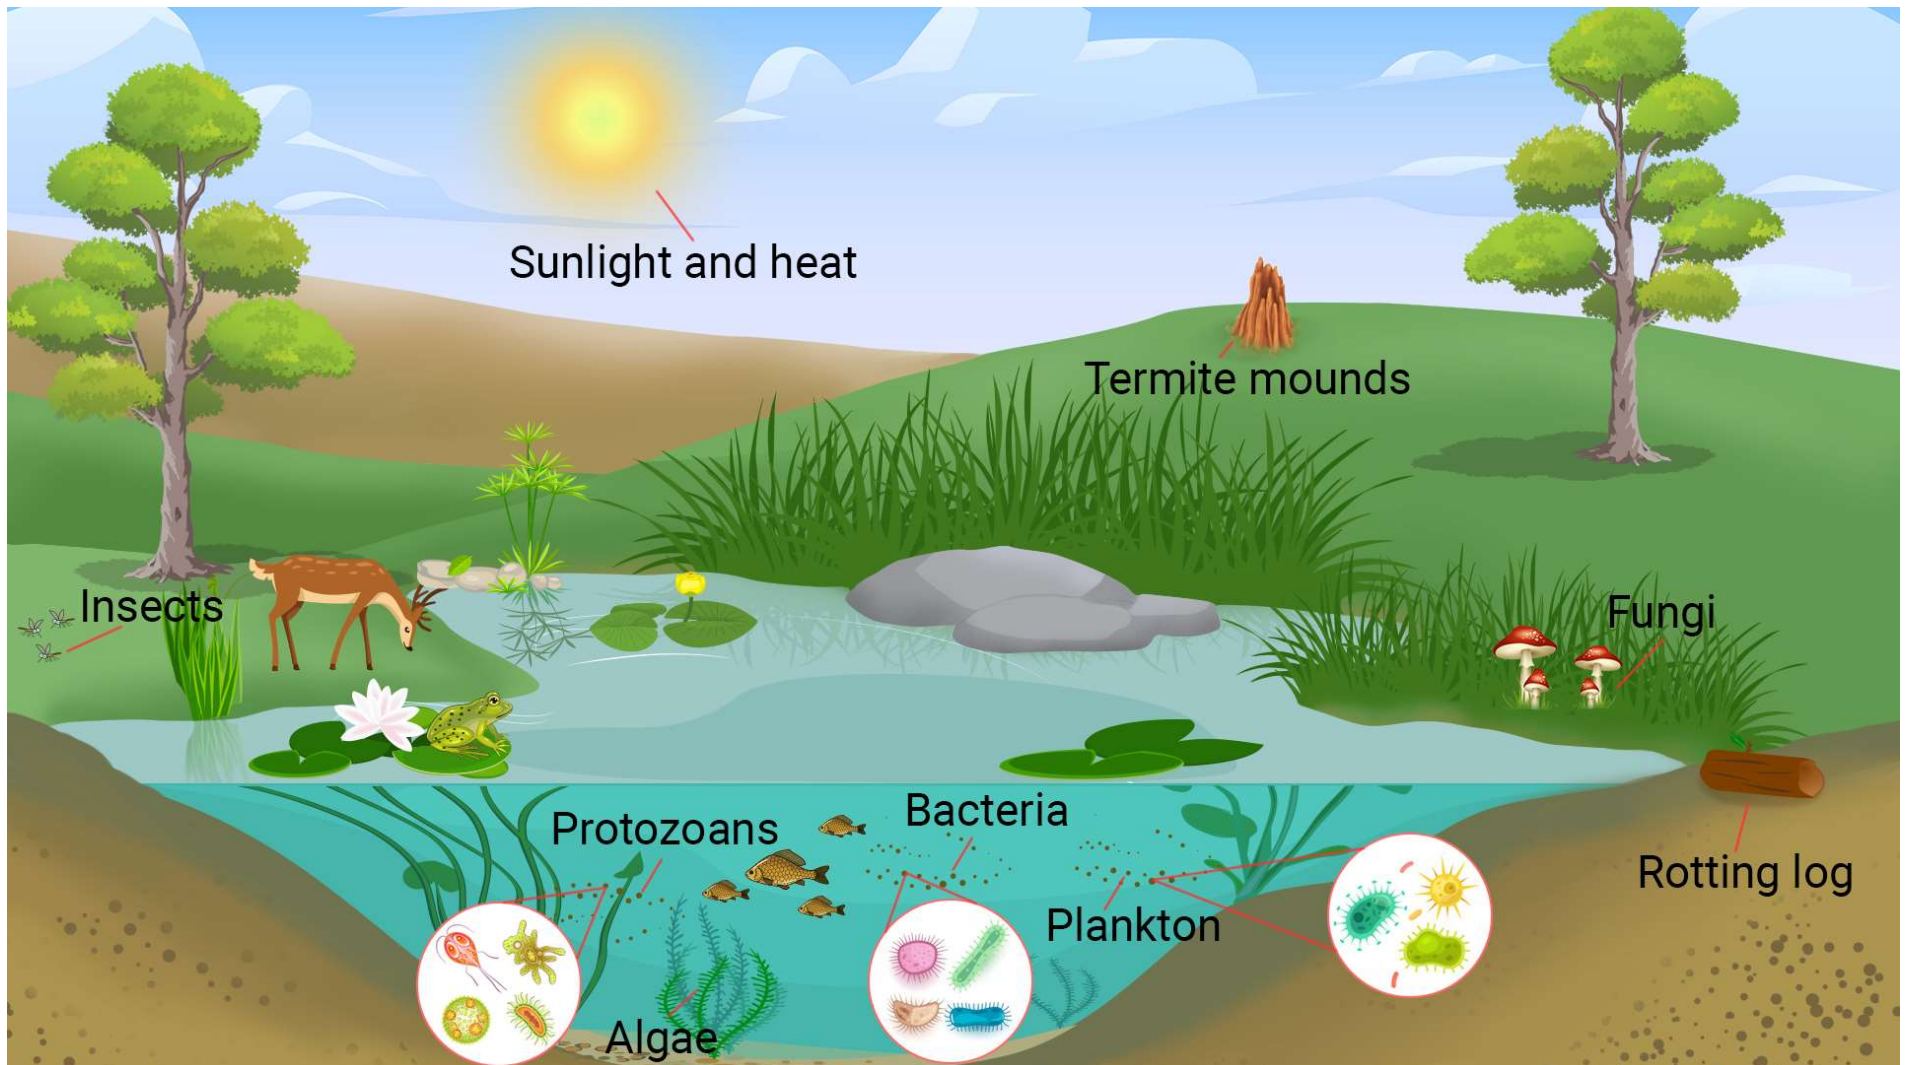

Introduce yourself!

- ✓ What do you do?
- ✓ What were you doing before coming to class?
- ✓ Why did you choose this lesson?

In the chat, write down the names of organisms and things you can see.

Describe the organisms in the picture below.

Reading Activity: Pronunciation

An ecosystem is a community of living things (plants, animals, and microorganisms) and their non-living environment (like air, water, and soil) working together.

✓ Using the IPA below, identify the corresponding words in the text.

- tə'gɛðər
- 'lɪvɪŋ
- kə'mjʊnɪti
- ɪn'vaɪrənmənt

Match the animals with their categories.

Herbivores: Animals that eat only plants. Examples include cows, rabbits, and deer.

Carnivores: Animals that eat only meat. Examples include lions, wolves, and eagles.

Omnivores: Animals that eat both plants and meat. Examples include bears, pigs, and humans.

Types of Ecosystems

Match them with their definitions.

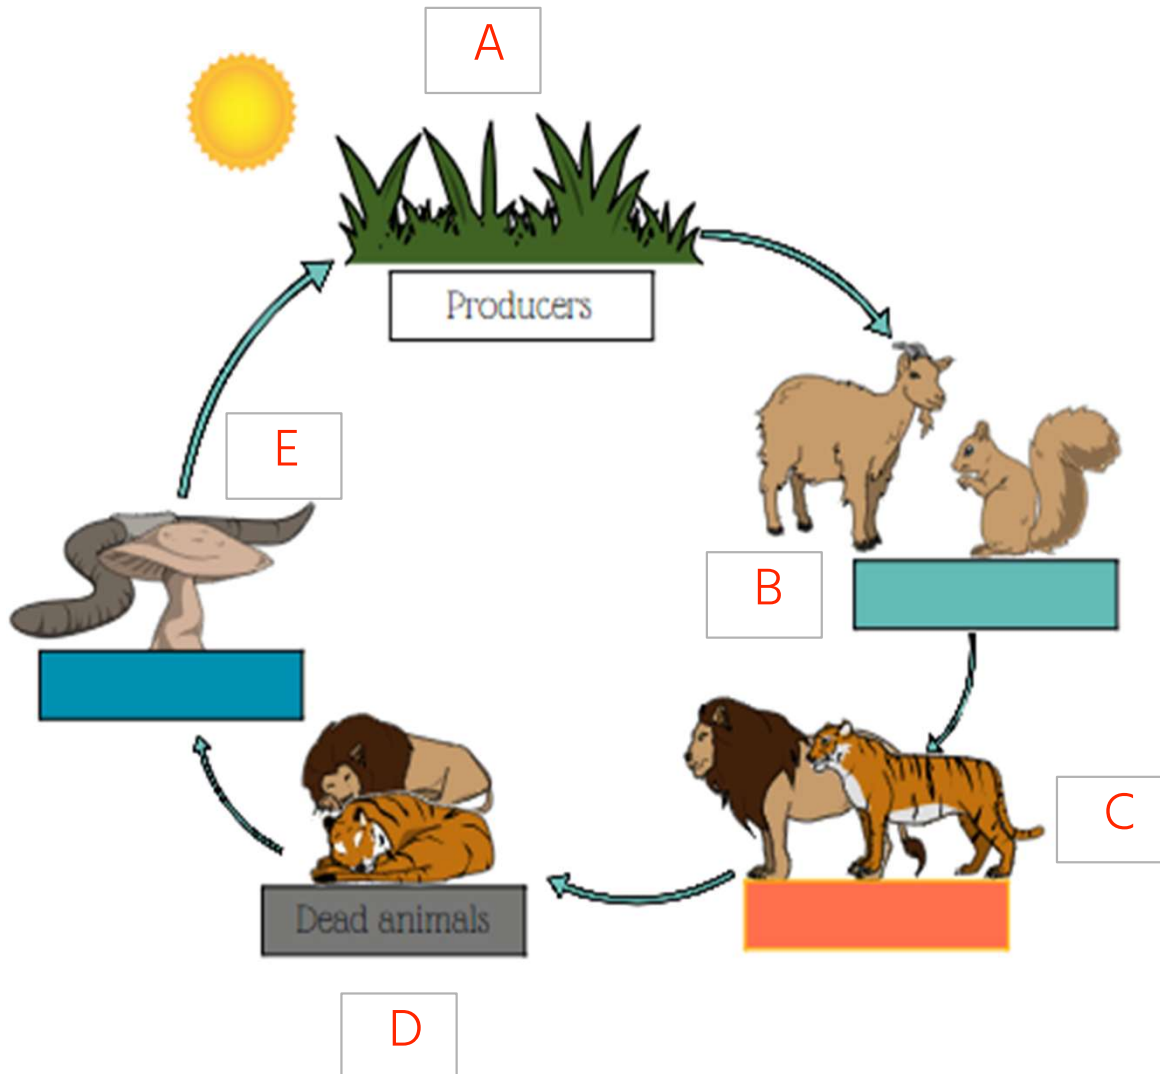

1. _____	2. _____	3. _____	4. _____	5. _____
An area where the land is covered with shallow water, like marshes and swamps.	A grassy plain with scattered trees	A dry, hot area with very little rain. It has few plants, mainly cacti.	A cold, treeless area where the ground is frozen most of the year.	A large area filled with trees, plants, and animals.

Forest - Tundra - Desert – Savannah - Wetland

Match the definitions with the correct their terms.

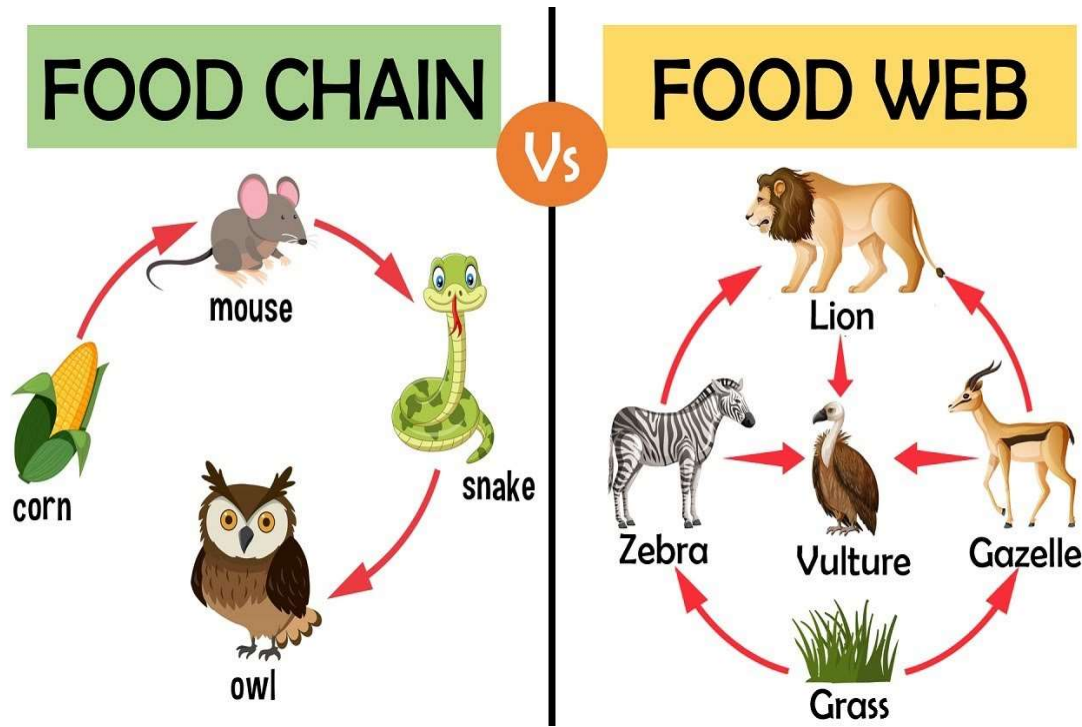

- | | |
|--|---------------|
| 1. An animal that hunts and eats other animals (prey) for food. | A. Producer |
| 2. An organism, like bacteria or fungi, that breaks down dead material and recycles nutrients. | B. Decomposer |
| 3. An animal that is hunted and eaten by predators. | C. Predator |
| 4. An organism, like a plant, that makes its own food and provides energy to other organisms. | D. Prey |

Use the Terms Below to Label B, C and E.

- Producers
- Predators
- Decomposers
- Dead animals
- Prey

Fill in the blanks with the correct words from the list below.

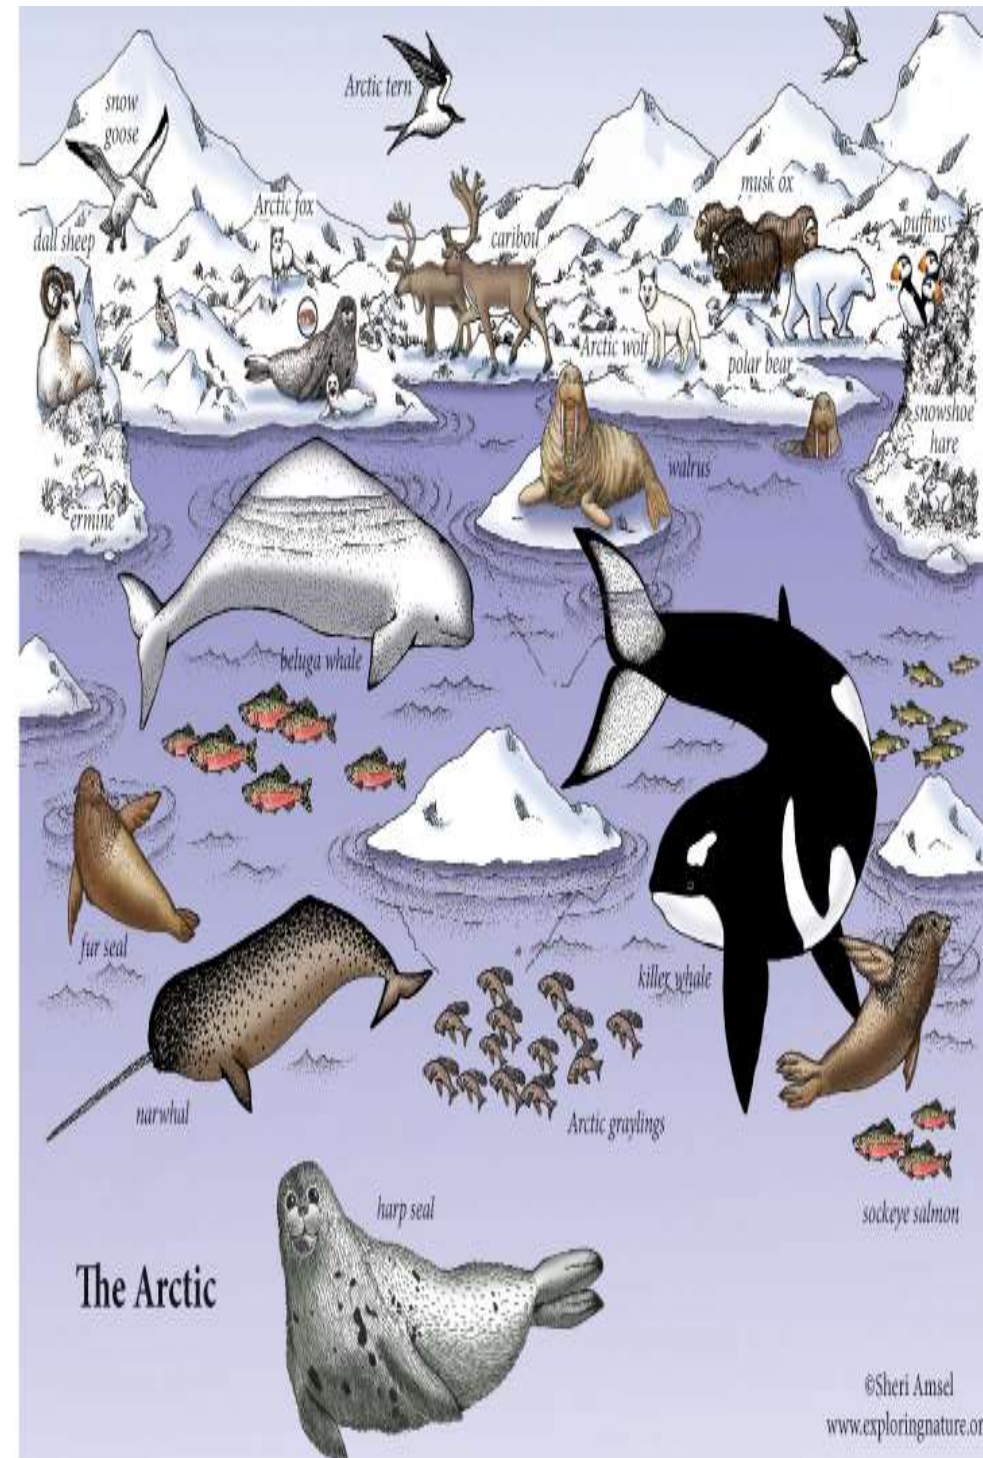

A food_____ is a network of many food _____ that shows how different living things _____ an ecosystem are connected by what they _____.

chains – eat – web - in

Exploring the Tundra: A Unique Ecosystem

The tundra is a cold, treeless region found in the Arctic and high mountains. It has long, harsh winters and short, cool summers. The ground is covered in permafrost, a layer of permanently frozen soil.

Despite the extreme conditions, the tundra supports life. Plants like mosses and lichens grow close to the ground, while animals such as polar bears, Arctic foxes, and caribou have adapted to the cold with thick fur or fat layers.

Questions: Refer to the Article

Where is the Tundra located?

- a) The Arctic
- b) Africa
- c) South America

The Tundra doesn't support life.

- a) True
- b) False

The following animals are found in the Tundra except_____.

- a) Lion
- b) Arctic fox
- c) Polar bear

Grammar: Plural Nouns

Choose the correct option.

A group of antelopes/antelope eat grass in the open field.

Many fish/fishes swim together in the water, shining in the light.

The camels/camel walk across the desert, carrying things for people.

Three deers/deer are resting under the trees, enjoying the cool shade on a warm day.

Today we learned...

- ✓ To discuss different types of ecosystems.
- ✓ The categories of organisms.
- ✓ About food chain and food web.
- ✓ To review plural nouns.
